

JOIN EFFORTS TOWARDS NATIONAL COORDINATION OF LOW DOSE AND LOW DOSE RATE RADIATION (LDRR) RESEARCH

LOW DOSE RADIATION

Low dose radiation research (<100 mGy for acute low doses, <6 mGy/h for chronic) is relevant to environmental and occupational exposures and is an important focus area globally.

WHO WOULD IT INVOLVE?

Coordination would be a co-operative effort between researchers within government, industry, and academic agencies and be based on volunteer participation.

WHY IS COORDINATION IMPORTANT?

Coordination will improve work efficiencies, collaborations, build expertise to support optimized decision-making, and advance science in the area of LDRR.

TARGETED OUTCOMES:

- Impactful deliverables that are translatable to policy
- Shared resources and research facilities
- Increased opportunities for funding
- Minimal duplication of projects

BENEFITS:

- Coherence of research programs
- Information-sharing towards open science
- Enhanced communication with international agencies

WE ARE SEEKING:

- RADIATION RESEARCHERS
- FUNDING AGENCIES
- POLICY-MAKERS
- RISK ASSESSORS
- EDUCATORS
- STUDENTS

Be a part of National Coordination!
